

IN-TRACK is a solution that brings transparency and accountability throughout the supply chain, addressing almost all of the critical supply chain issues that the maritime container industry faces.

Lack of information, bottlenecks, untimely delays and supply chain disruption are challenges that anyone involved in the shipment of containers has to overcome to effectively manage the complex demands of the modern import / export industry. Organisations ranging from multi-nationals to local enterprises lose money by simply not having the information required to answer the most basic of supply chain questions such as "where is my shipment?" or "when will it arrive?"

IN-TRACK provides a unique and innovative answer to these issues by incorporating information from the clients or suppliers own systems, and integrating with external reporting mechanisms. It then brings in data from third party providers to create visibility that not only answers the basic questions but provides opportunity to effectively manage the entire supply chain.

We are encouraged through studying **INTEGRITY**, a recent European Commission report on Door to Door container supply chain visibility, Logisoft developed **IN-TRACK** to work in partnership with the shipping lines and **IN-TOOL**, our own EDI solution.

IN-TRACK has the capability of displaying the data of all containers booked and shipped, whether using the **IN-TOOL** application or data from another source. **IN-TRACK** receives container status updates from the ocean carriers or by utilising vessel departure and arrival data gained from mandatory **AIS** data, applying our own innovative algorithms created from AIS data and matching vessels to containers.

As **IN-TRACK** imports data from the client system and attaches it to the container being shipped, **IN-TRACK** can be used either as an information portal providing the location of goods, or as part of a complete Order Management System initiated by an EDI receipt of the originating purchase order.

IN-TRACK 's versatility allows for Administrators to define access to internal staff and, if required, external stakeholders, restricting fields of information through password controls to authorised users. **IN-TRACK** enables 3rd party access and data input for additional fields where required, this functionality allows for even more visibility as other stakeholders, such as agents, customers or consignees can add data or view information as required.

Exception email or SMS alerts are sent automatically to administrator-defined internal and external recipients.

IN-TRACK also comes complete with a Management Reporting mechanism that empowers Management by providing critical reports of the efficiency of the supply chain, helping to identify weak links through performance analysis.

IN-TRACK is a dynamic, versatile and impressive tool that adds value to an organisation by providing it with the knowledge necessary to improve supply chain metrics.

For more of **IN-TRACK** 's capabilities, contact us by phone or email.

Main Features

- ✓ Inbound and cross trade container shipments can be received from the carriers or other third party sources and updated.
- ✓ National or international shipments can be managed from individual sites or globally.
- ✓ Automatic email alerts on status updates.
- ✓ Comprehensive KPI reporting.
- ✓ Mirrors all data submissions.
- ✓ Automatically receives mandatory carrier updates including Accepted, Gated-in, Loaded, Departed, Arrived, Gated-out, Empty container returned.
- ✓ Password protected, permissions based access To multiple users.
- ✓ Customizable colours, logos and reports.
- ✓ AIS data available.

Payment Options

Payment can be agreed and made monthly or annually to suit your needs.

AIS data is provided on a subscription basis.
